

A New repetitions
Known policies: R – D and D – C

Retrospective, qualified panel; known families

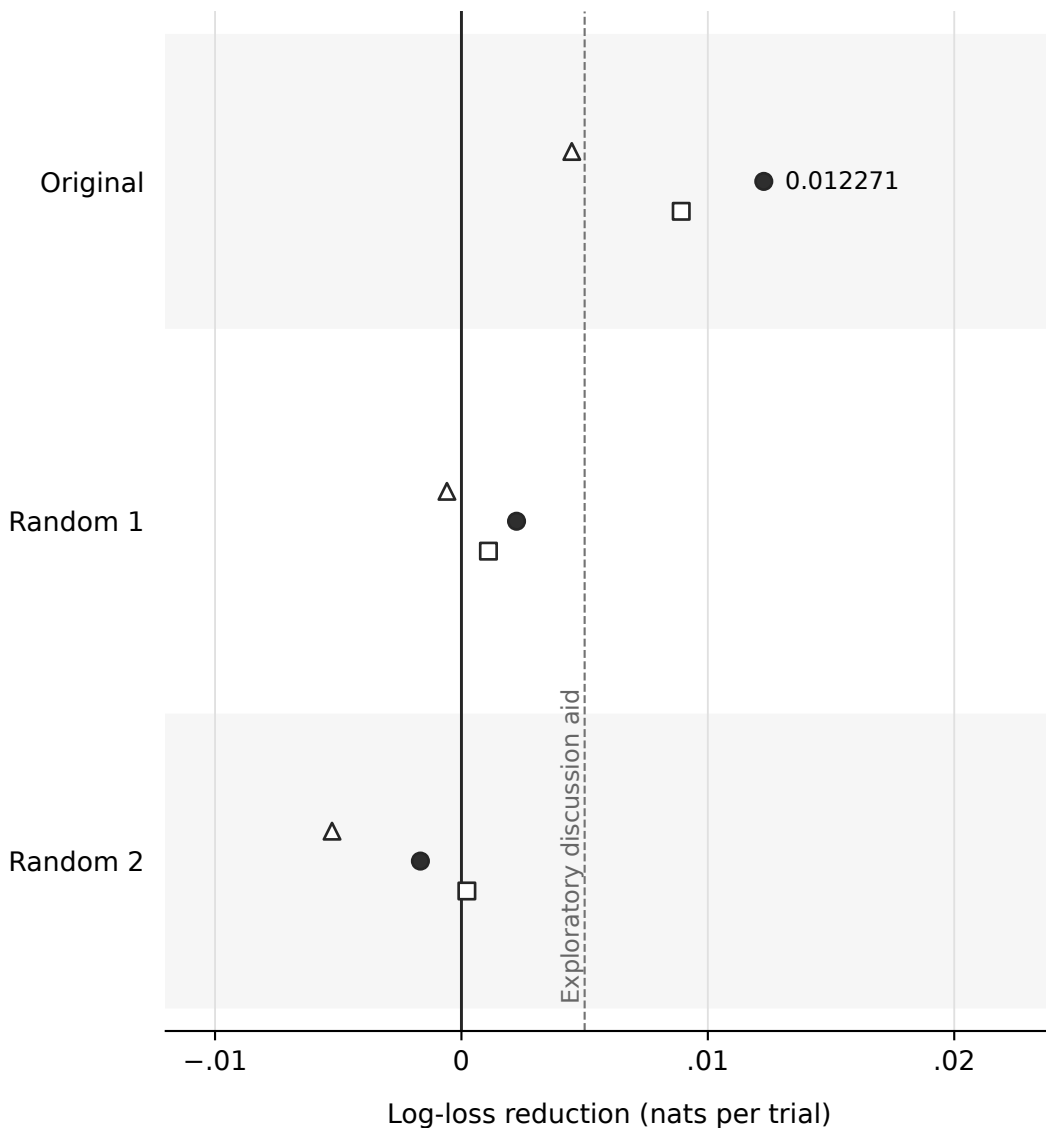

Positive favors D/C. Specifications, not confidence intervals.

B Excluded controller

Known families: G – H

Retrospective, qualified panel; known families

- $\lambda = 1$ (primary)
- $\lambda = 4$ (sensitivity)
- △ $\lambda = 0.25$ (sensitivity)

Positive favors H. 88 same-family responses before prediction.

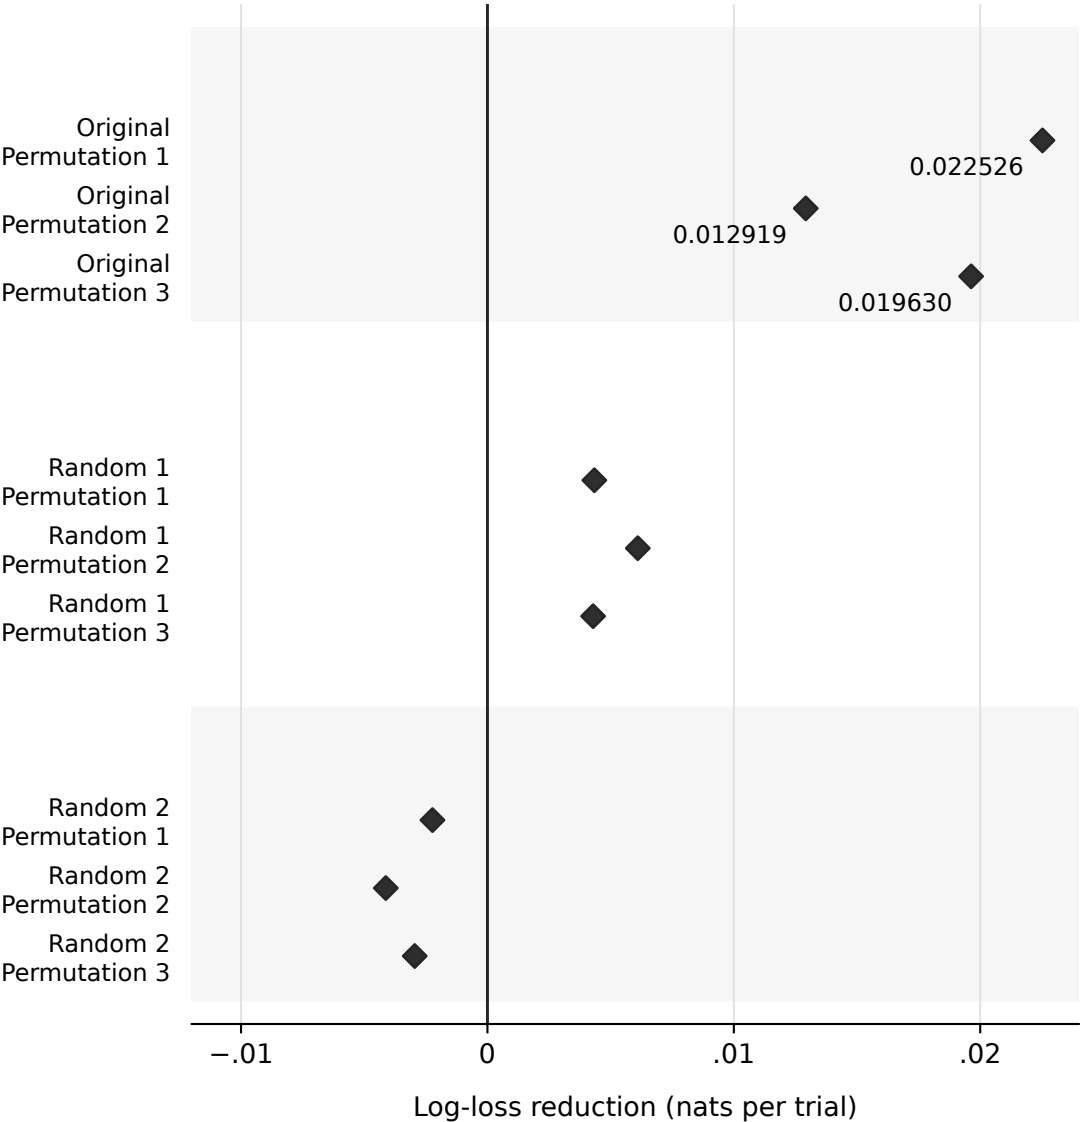

F_B under these masks: not evaluated. Full robust-benefit rule: not passed.

Panel B / 3 panels · Common horizontal scale · Caption accompanies figure

C Assignment sensitivity

Actual minus permuted G – H

Retrospective, qualified panel; known families

◆ $\lambda = 1$; descriptive assignment controls

Positive favors actual assignment. Not a permutation significance test.
